

Short bio

David Golan, co-founder and the CTO of Viz.ai

David Golan is a co-founder and the CTO of Viz.ai - a digital healthcare company harnessing deep learning to analyze medical data and improve clinical workflow.

Viz.ai developed the First ever FDA-approved AI-powered triage system for stroke.

Prior to founding Viz.ai, David was a Fulbright post-doctoral scholar at Stanford university, working on leveraging deep learning for the analysis of medical imaging and genetic data.

David holds a PhD in Statistics and Machine learning from Tel-Aviv University, and have coauthored more than 20 scientific papers including three publications in the journal Science.

Prior to his academic career, David founded the ML team of b-hive Networks, an Israeli startup which was acquired by VMWare in 2008
